Sign convention: capex and working-capital outflows are negative. DCF tab shows capex as a positive number and subtracts it.

Documentation of Assumptions

Values on this tab are live links to the model (green) unless shown as blue inputs. Change inputs on their source tab. Source IDs [R#] refer to the References tab.

1. Valuation basis

Item	Value	Basis / rationale	Source
Company	Vinamilk JSC (VNM), HOSE	Vietnam Dairy Products JSC. Reported in VND billions, consolidated, VAS.	R1, R2
Valuation method	Unlevered DCF	Five-year explicit forecast (2026E-2030E), Gordon-growth terminal value, end-of-period discounting. Structure follows the beginner DCF template.	R13
Balance sheet / valuation date	30 Jun 2026	Latest reviewed interim statements. Cash, debt, non-controlling interest and associates are taken at this date.	R2
Market data date	16-Oct-2026	Share price and government bond yield at the 16 Oct 2026 close.	R3, R4
Units	VND billions	Shares are in billions so that VND bn divided by bn shares gives VND per share.	
First discount period (years)	0.5	Half-year stub: periods run 0.5 to 4.5. 2026E cash flow is cut to H2 only by deducting H1 2026 actual UFCF, which is already inside the 30 Jun cash balance.	R2

2. Operating forecast drivers

Driver	2026E	2027E	2028E	2029E	2030E	Basis / rationale	Source
Revenue growth	11.0%	4.5%	4.0%	3.5%	3.0%	H1 2026 revenue grew 17.8% YoY, but management guides FY2026 to only +4.3% (VND 66.45trn) and Q1 industry demand fell 3.7%. 2026E assumes +11.0%, which implies H2 2026 growth of about 5% YoY, then fades to 3.0% by 2030E.	R2, R9, R10
Gross margin	41.6%	41.5%	41.4%	41.3%	41.2%	FY2025 41.2%; H1 2026 43.1%. Assumed 41.6% in 2026E, below the H1 run-rate, easing to 41.2% as input-cost and competitive pressure normalise.	R1, R2
Selling & marketing, % of sales	20.8%	21.0%	21.1%	21.1%	21.2%	H1 is seasonally heavy (H1 2025 23.2% vs FY2025 21.4%). H1 2026 improved to 22.4%. 2026E assumes about 0.6pt improvement on FY2025, rising gradually to 21.2% as promotion intensity returns.	R1, R2
G&A, % of sales	3.0%	3.0%	3.0%	3.0%	3.0%	Held flat at about the FY2025 level (3.0%); H1 2026 was 2.8%.	R1, R2
EBIT margin (output)	17.8%	17.5%	17.3%	17.2%	17.0%	Result of the three lines above: gross margin less selling less G&A. FY2025 16.8%, H1 2026 18.0%, VNDirect FY2026F 16.6%. EBIT excludes finance income, which is captured through cash in the equity bridge.	R1, R2, R11
Tax, % of EBIT	20.0%	20.0%	20.0%	20.0%	20.0%	Statutory rate 20%. Total tax expense / EBIT was 19.5% to 21.0% in FY2021-25 and 20.2% in H1 2026.	R1, R2, R8
D&A, % of sales	3.5%	3.5%	3.5%	3.5%	3.5%	Includes goodwill amortisation of about 246bn a year, which is added back. Historical ratio fell from 3.9% to 3.7%; assumed 3.5%.	R1
CapEx, % of sales	3.0%	3.2%	3.3%	3.4%	3.5%	Historical 2.4% to 2.8% and only 2.1% of sales in H1 2026. Assumed to step up to 3.0% and reach 3.5% by 2030E so terminal-year capex equals D&A (asset base maintained). Deliberately conservative.	R1, R2
Change in NWC, % of sales	-3.0%	-3.0%	-3.0%	-3.0%	-3.0%	Five-year average of about -3.0% (range -1.2% to -4.3%). Negative = cash outflow. Includes other operating payments (code 17), which recur every year.	R1

3. Discount rate (WACC)

Input	Value	Basis / rationale	Source
Risk-free rate	4.58%	Vietnam 10-year government bond yield (VND) at 16 Oct 2026.	R4
Beta	0.67	Raw 5-year beta about 0.50 (another data provider shows 0.34). Blume-adjusted: 0.67 x 0.50 + 0.33 = 0.665, rounded to 0.67. Low raw beta reflects a defensive consumer stock; WACC is sensitive to this choice.	R6
Market risk premium	8.13%	Damodaran total equity risk premium for Vietnam: 4.23% mature market plus 3.90% country risk premium (Ba2 rating).	R5
Cost of equity	10.03%	Risk-free rate + beta x market risk premium.	
Pre-tax cost of debt	3.50%	Interest expense divided by average borrowings: about 3.5% in FY2025 and 3.2% in FY2024.	R1, R7
Tax rate	20.0%	Vietnam statutory corporate income tax rate.	R8

Debt weight	6.5%	Borrowings at book value (30 Jun 2026) over borrowings plus market capitalisation.	R2, R3
Equity weight	93.5%	Market capitalisation: VND 57,800 x 2.09bn shares.	R3
WACC	**9.55%**	Output. Feeds DCF!D9 and every discount factor.	

4. Terminal value

Item	Value	Basis / rationale	Source
Terminal growth rate (TGR)	3.0%	Set below the 4.58% risk-free rate, since perpetual growth should not exceed long-run nominal growth. Terminal-year capex equals D&A, so reinvestment is consistent with the growth rate.	R4
Terminal-year capex, % of sales	3.5%	Equal to terminal-year D&A (below), so the asset base is maintained rather than depleted.	
Terminal-year D&A, % of sales	3.5%		
PV of terminal value, % of EV	74.8%	Roughly three quarters of enterprise value comes from the terminal value, so the result is most sensitive to WACC and TGR. See the sensitivity table on the DCF tab.	

5. Equity bridge and stub period (VND billions)

Item	Value	Basis / rationale	Source
Cash and cash equivalents	4,535.7	30 Jun 2026 balance sheet (code 110).	R2
Short-term financial investments	21,967.6	Mostly short-term held-to-maturity bank deposits (code 120), treated as cash-like.	R2
Investments in associates and JVs (book)	610.2	Share of their profit sits below EBIT, so they are added at book value (code 262).	R2
Total added to EV	**27,113.5**	Long-term held-to-maturity investments were nil at 30 Jun 2026 (376.9bn at 1 Jan 2026).	R2
Check vs DCF!N59 (should be 0)	0		
Short-term borrowings	8,323.4	Code 321.	R2
Long-term borrowings	131.4	Code 339. Total borrowings 8,454.9 (rounding in source).	R2
Non-controlling interest (book)	3,798.9	Deducted at book value (code 429); market value of minorities not estimated.	R2
Total deducted from EV	**12,253.7**		
Check vs DCF!N60 (should be 0)	0		
2026E full-year UFCF (before stub)	8,294	EBIAT + D&A - capex + change in NWC for the full year 2026E.	
Less: H1 2026 actual UFCF	3,651	H1 EBIT 6,291.0 less tax 1,270.9 plus D&A 1,204.4 less capex 748.2 less working-capital outflow 1,825.0. Already reflected in the 30 Jun cash balance.	R2
H2 2026E UFCF used in the DCF	**4,643**	Discounted at 0.5 years.	

6. Key judgements and limitations

• Cost of equity treatment: the base case uses the Vietnamese government yield with the full Damodaran country premium, which is common broker practice but partly double counts sovereign risk. A Damodaran-consistent treatment (risk-free rate less the 2.56% sovereign default spread) or a mature-market premium only would give a WACC of roughly 7.1% and a much higher value.

• Beta uncertainty: a raw beta of 0.50 gives a WACC of roughly 8.2% and 0.80 gives roughly 10.5%. The sensitivity table on the DCF tab shows the effect of a WACC range of plus or minus 1 percentage point.

• Terminal value is about three quarters of enterprise value, so the valuation depends mainly on long-run margin (EBIT margin 17.0% in 2030E), TGR and WACC.

• Forecasts are author estimates informed by H1 2026 results, management 2026 targets and a March 2026 broker report. They are not company guidance. Management's 2026 target looks conservative given the H1 growth of 17.8%.

• Cash includes VND 21,968bn of short-term bank deposits treated as fully liquid; no deduction is made for operating cash needs. Non-controlling interest is deducted at book value.

• EBIT excludes finance income, share of associates' profit and other income; these assets enter through the bridge. Goodwill amortisation sits inside G&A and is added back with D&A.

• Tax is applied at 20% of EBIT. Share count is taken from a market-data site and treasury shares were not checked against the filing.

• Press-reported figures (H1 results, management targets) were used for context only; model inputs come from the extracted financial statements. This workbook is an educational exercise and not investment advice.
